Safety Light Curtain / Multi-Beam Safety Sensor

F3SN-A/F3SH-A

- Type 4 sensor complying with IEC and EN standards (IEC61496-1, -2, EN61496-1). Complies with EU machine directives (certified by BG/DEMKO).
- Detection height = Sensor length meets the user's requirements
- Detection height 189 to 1822 mm.
 Sensing distance 7 and 10 m.
- Various functions can be set by means of setting console.
- Equipped with a LED bar for easy adjustment of the optical axis and quick detection of failures.

Features

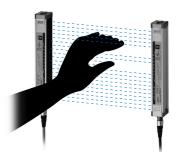

Select the optimum safety sensor for the application. Omron provides two safety types, the "Safety Light Curtain" and the "Multi-Beam Safety Sensor".

Finger protection

Safety light curtain F3SN-ADDDDP14(H)

Sensing distance : 7 m

- Minimum detectable object: 14 mm dia.
 (9 mm optical axis pitch)
- Detection height:189 to 1611 mm

Hand protection

Safety light curtain F3SN-ADDDDP25

Sensing distance: 10 m

- Minimum detectable object: 25 mm dia.
 (15 mm optical axis pitch)
- Detection height:
 217 to 1822 mm

For presence inspection with a horizontal installation, types with minimum detectable object sizes of 40 mm (optical axis pitch: 30 mm) and 70 mm (optical axis pitch: 60 mm) can also be manufactured. (Please contact your OMRON Representative.)

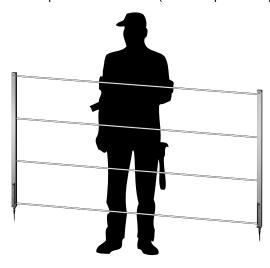

Body protection

Multi-beam safety curtain

F3SH-A09P03

Sensing distance : 10 m

• Number of optical axes: 4 beams (300 mm optical axis pitch)

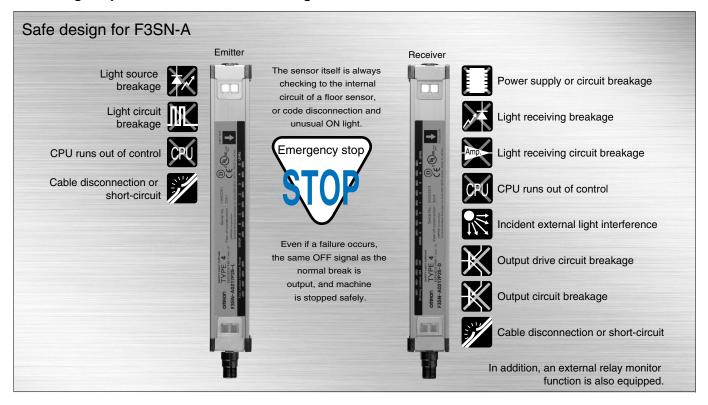

Features

A superior standard of safety design prevents machine accidents.

Wide-range implementation of fail-safe design.

Self-failure diagnosis triggers output shut off.

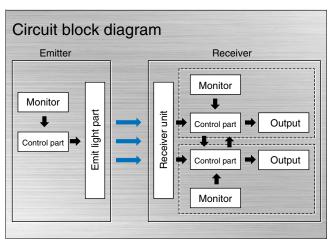

Technology-supported safety design

Safety is top priority based on the maximum standards of safety design and FMEA analysis.

Fail-safe design based on dual CPUs for mutual checking and duplex signal processing and output circuits. Relentless pursuit of safety based FMEA analysis * to prove safe operation.

* FMEA: Failure Mode and Effects Analysis

Meets global safety standards for safety sensors.

Type 4 sensors complying with IEC and EN standards

Complies with international standards IEC61496-1 and IEC61496-2, and EN standard EN61496-1, which are state-of-the-art "musts" for safety sensors.

Complies with EU directives

Certification of compliance with EC testing and EMC directives received from DEMKO and BG.

Received UL certification for models for the U.S. and Canada.

(Can be used in machines subject to OSHA rules and ANSI standards.)

Received UL listing and UL listing for Canadian safety standards based on UL508 and IEC61496-1/2. Can be used in machines subject to OSHA directives (29 CFR 1910.212), which are directives related to labor safety in the U.S. Meets also the requirements of ANSI/RIA R15.06-1999, a U.S. standard for industrial robots.

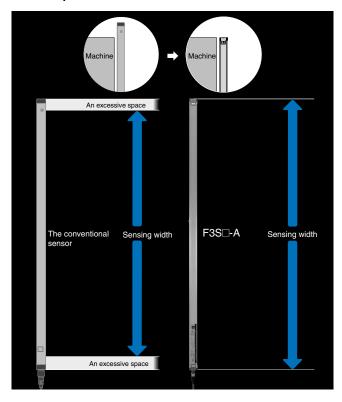

Features

We provide the perfect size for use in hazardous areas.

A new concept that perfectly fits the needs of the user.

The detection height equals to the sensor length.

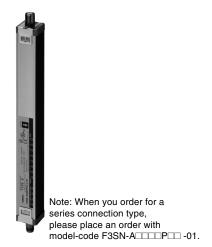

Excess space has been minimized.

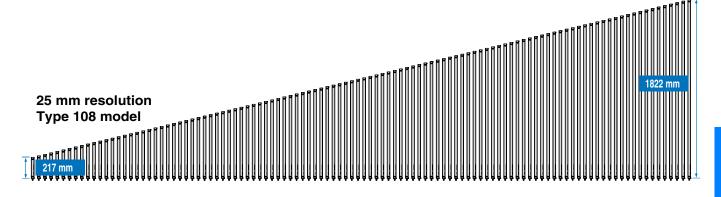

Select the optimum length

Up to 3 sets can be connected in series. Mutual interference can be prevented.

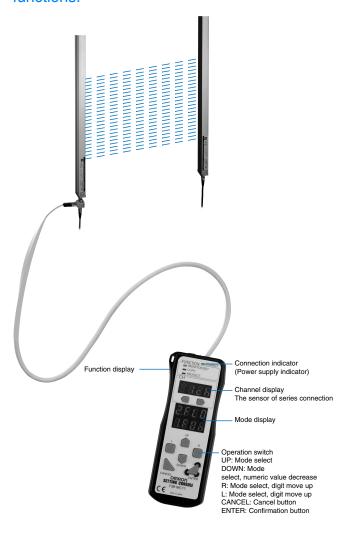

A standard type and a link-up type with a connector can be combined to connect up to 3 sets in series.

Features

The setting console--the first in the industry--allows you an easy and safe setting of various functions.

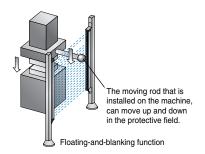

Includes two types of blanking functions

Blanking function for changing the detection pattern of the safety light curtain.

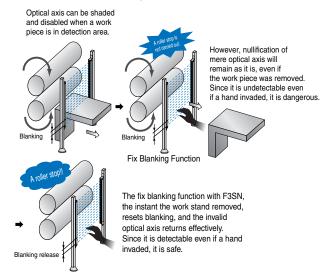

Basic pattern 1: Floating blanking function

This function allows you to disable an unspecified 1, 2, or 3 optical axes. If more than the set optical axes is interrupted, the output shuts off.

(Example of floating blanking function)

Basic pattern 2: Fixed blanking function Specific optical axes are masked by teaching and disabled. (Example of fixed blanking function)

Other functions to be set with the setting console

- Auxiliary outputs: Outputs such as ON at Dark, ON at Light, light intensity diagnosis, and lockout can be selected.
- Large indicator lamp outputs: large indicator lamp outputs can be selected from ON at Dark, ON at Light, light intensity diagnosis, and lockout.
- External device monitoring function: Allows you to monitor the feedback of external devices.
- Interlock function: Interlocks can be set at power-on and restart.
- Setting copy function: Allows you to copy the settings of one sensor to another sensor.
- Protect function: Changing of sensor settings can be prohibited and restricted.

F3SH-A Multi-beam safety sensor

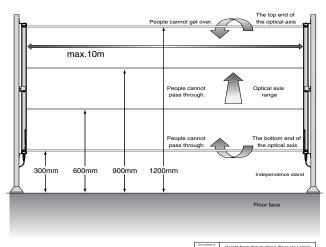

Recommended dimensions of EN standard for F3SH-A (4-optical axis multi-beam) **Human body detection achieved**

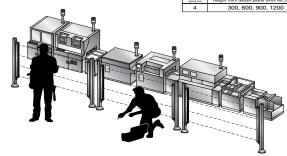

4 optical axes at a 300 mm pitch. Detects break by entire body.

In EN Standard EN999 (machine safety: positioning of protective devices in relation to the approach speed of human body parts), the values in the following table are recommended as the most effective regarding the height from the reference surface (floor, etc.) of each optical axis of the 4 optical axis multibeam sensor.

The optical axis pitch of the F3SH-A matches the recommended pitch, and, thus, in the installation shown in the following diagram, every type of intrusion is detected, including intrusion by passing under the lowest optical axis and intrusion by passing over the highest optical axis.

(Installation example based on EN999 recommended dimensions for multi-beam safety sensors)

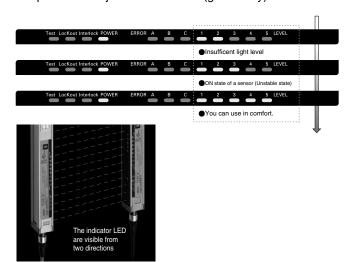

Easy safety application

Various safety functions are implemented. Can be adapted to various safety circuit system configurations.

- Interlock function
- Auto reset / manual reset can be selected
- External device monitoring function

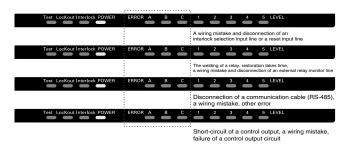

Equipped with LED bar for easy use. Easy optical axis adjustment using LED displays. Enables certain installation.

Optical axis adjustment indicator (green only)

Error modes can be clearly indicated to provide a safety backup.

Error display example (red only)

Full lineup of accessories (optional)

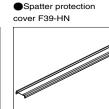

When the optical axis from an emitter is reflected a the angle of 90 degrees with using a mirror, the 2nd plane and the 3rd plane can be protected by one set of sensors. Sensing distance

- Protective tube
- Slit cover
- Free location brackets
- Muting controller
- PSDI controller

Accessories (Order Separately)

Control Unit

| Appearance | Output | Model | Remarks |
|------------|------------------|-------|--|
| - | Relay, 3NO + 1NC | | For connection with the F3SN-A, and F3SH-A, use F39-JC□B cables fitted with connectors at both ends. |

^{*1.} in the model name indicates the detection width (mm).
*2. F3SN-A P14-01is a customized model. For order placement, please contact your OMRON representative.

Safety Relay Unit

| Appearance | Output | Model | Remarks |
|------------|------------|-------------|--|
| | Relay, 3NO | G9SA-300-SC | For connection with the F3SN-A, and F3SH-A, use F39-JC□C cables fitted with connectors at both ends. |

Muting Controller

| Appearance | Model | Remarks |
|------------|-------|---|
| | | For connection with the F3SN-A, and F3SH-A, use F39-JC□A cables fitted with connectors at single end. |

Setting Console

| Appearance | Model | Accessories |
|------------|----------|---|
| | F39-MC11 | One branching connector, one connector cap, 2-m cable, instruction manual |

Branching Connector

| Appearance | Model | Remarks |
|------------|---------|---|
| | F39-CN1 | Purchase this connector when needed additionally for installing the F39-MC11. |

Single-ended Connector Cable (For Emitter and Receiver Set)

| Appearance | Cable length | Specification | Model |
|------------|--------------|------------------------|-----------|
| | 3 m | | F39-JC3A |
| | 7 m | M 12 connector (8 pin) | F39-JC7A |
| | 10 m | | F39-JC10A |
| | 15 m | | F39-JC15A |

Double-ended Connector Cable (For Emitter and Receiver Set)

| Appearance | Cable length | Specification | Model | Application |
|------------|--------------|---------------|-----------|---|
| | 0.2 m | | F39-JCR2B | |
| | 0.5 m | | F39-JCR5B | Series connection or connection with F3SP-B1P |
| | 3 m | | F39-JC3B | Connection with 1931 -B11 |
| | 5 m | M12 connector | F39-JC5B | |
| | 7 m | (8 pins) | F39-JC7B | |
| | 10 m | | F39-JC10B | Connection with F3SP-B1P (see note 1) |
| | 15 m | | F39-JC15B | |
| | 20 m | | F39-JC20B | |
| | 0.2 m | | F39-JCR2C | |
| • 1 | 1 m | | F39-JC1C | |
| | 3 m | M12 connector | F39-JC3C | Connection with G9SA-300-SC |
| | 7 m | (8 pins) | F39-JC7C | (see notes 1 and 2) |
| | 10 m | | F39-JC10C | |
| | 15 m | | F39-JC15C | |

Note: 1. Cannot be used for series-connection purpose.

2. When two or more cables have to be used for connection with the G9SA-300-SC, connect the necessary number of F39-JC□B cables to one F39-JC□C cable.

(Example) When a 35 m long cable is required, connect two F39-JC \square B cables to one F39-JC \square C.

External Indicators (Separate Models for Emitters and Receivers)

| Appearance | Specification | Indicator | Туре | Model |
|------------|------------------------------|-----------|----------|-------------|
| Manufi | M12 connector for PNP output | Red | Emitter | F39-A01PR-L |
| | | | Receiver | F39-A01PR-D |
| | | Green | Emitter | F39-A01PG-L |
| W | V | | Receiver | F39-A01PG-D |

Note: These indicators are used for connecting with series-connection type emitters/receivers (models ending in -01). The desired turn-ON timing (type of signal) can be selected on setting console.

Spatter protection covers (1 set of 2 covers for both Emitter and receiver)

| Shape | Applicable models | Model |
|-------|---------------------------------|---------------|
| | F3SN-A□□□□P14 | F39-HN□□□□-14 |
| | F3SN-ADDDP25 F3SN-ADDDP25-01 | F39-HN□□□□-25 |
| | F3SH-A09P03 | F39-HH09-03 |

Note: In the model name indicates the 4-digit sensor detection width (in sensor models).

Refection mirror (15% sensing distance attenuation)

| Mirror material | Width (mm) | Thickness (mm) | Length (mm) | Model |
|-----------------|------------|----------------|-------------|-------------|
| | | | 310 | F39-MDG0310 |
| | | | 460 | F39-MDG0460 |
| | | | 607 | F39-MDG0607 |
| | 125 | 31 | 750 | F39-MDG0750 |
| Glass mirror | | | 907 | F39-MDG0907 |
| Ciass Illiiloi | | | 1,057 | F39-MDG1057 |
| | | | 1,207 | F39-MDG1207 |
| | | | 1,357 | F39-MDG1357 |
| | | | 1,500 | F39-MDG1500 |
| | | | 1,657 | F39-MDG1657 |

Note: Other sizes are available upon request

IP67 environment-resistant Enclosure (A Package of tube, Gasket, and Bracket; see note)

| Appearance | Applicable sensor | Model |
|------------|---|--------------|
| | F3SN-A□□□□P14(-01) | F39-HP□□□-14 |
| | F3SN-A P25(-01) F3SN-A P40(-01) F3SN-A P70(-01) | F39-HP□□□-25 |
| | F3SH-A09P03(-01) | F39-HPH09-03 |

Note: Purchase 2 sets when using both an emitter and a receiver.

OMROD

Mounting Bracket for Sensor (Optional)

| Appearance | Specification | Model | Remarks |
|------------|---|---------|---|
| | Wall mounting bracket Material: Iron (zinc plating) (see note) | F39-L18 | For emitter: 2 pcs. For receiver: 2 pcs. Total: 4pcs./set |
| | Free-location bracket Materials: Zinc die-cast (zinc plating) Note: Not provided with an angle deflection mechanism for beam control. | F39-L19 | Minimum order quantity: 1 pc. |
| | Free-location bracket Materials Sensor fixing element: Zinc die-cast (zinc plating) Mounting bracket: Iron (zinc plating) Note: Provided with an angle deflection | F39-L20 | Minimum order quantity: 1 pc. |
| | mechanism for beam control | | |

Note: Use these brackets for sensors having an operating range where no intermediate bracket is required (with an operating range of less than 640 mm)

Note: 1 .The 4 digits in 🗆 🖂 in the model number represent the protective height. Use the formula given in the information on protective height specifications to calculate the height.

For example, if the beam gap is 9 mm, and the No. of beams is 21, the protective height will be 9 × 21 = 189 mm. The model with this protective height is F3SN-A0189P14.

- 2 . F3SN-A P14-01 is a customized model. Consult with your OMRON representative when ordering this model.
- 3 . Models ending in -01 only.
 4 . For the factory setting, the manual reset mode is set to the "start/restart" interlock.
 Using the F39-MC11 can select either the start interlock or the restart interlock.
- 5 . For the factory setting, the function is not set. It can be enabled with the F39-MC11.
 6 . Not provided with the F3SN-A P70 and F3SH-A.
- 7 . The intermediate mounting bracket is supplied with the following types:
- Types which have the total length of the light curtain from 640 mm to 1280 mm: 1 set for each of emitter and receiver. Types which have the total length of the light curtain over 1280 mm: 2 sets for each of emitter and receiver. 8 .For sizes above 1,125 mm add "H" after P14, e.g. F3SN-A1143P14H. Ask for supplemental manual.

Accessories

| Applicable sensor | | F3SN-A□□□□P14(-01) | F3SN-A□□□□P25(-01)/P40(-01)/P70(-01), F3SH-A09P03(-01) | |
| Operating range characteristics | | 0.2 to 6 m | 0.2 to 10 m | |
| Degree of protection (see note) | | IP67 (IEC60529) | | |
| Materials | | Case: Acrylic resin, rubber: NBR60, mounting bracket: SUS316L, screw: SUS316L | | |

Note: To conform to IP67, tighten the screws according to the "Cautions for Use" as described in the manual packaged together with the product.

Connection

Using a manual reset function and an external device monitoring function

- S1: External test switch
- S2: Interlock/lockout reset switch
- S3: Lock-out reset switch (if the switch is not needed,
- connect to 24 V DC)
- K1, K2: Relays for control of dangerous parts of machine.
- K3: Load, PLC, etc. (for monitor)

Note: If you do not intend to use the external relay monitor, connect the auxiliary output that is set for dark: ON operation to the external relay monitor input, or use F39-MC11 to disable the external relay monitor function.

Correct Usage

This catalog is intended as a guide for product selection. Be sure to use the instruction manual provided with the product for actual operation.

Regulations and Standards

- "Type Approval" specified in the Chapter 44. 2 of the Industrial Safety and Health Law in Japan does not apply to independent units of the F3SN-A/F3SH-A sensors. This law applies to systems incorporated with the sensor's.
 - When using the F3SN-A/F3SH-A sensor in Japan as "safety devices for presses or shearing machines" as specified in the Chapter 42 of the same law, apply for approval as a system.
- (1) The F3SN-A/F3SH-A is electro-sensitive protective equipment (ESPE) in accordance with European Union (EU)
 Machinery Directive Annex IV, B, Safety Components, Item 1.
 - (2) The F3SN-A/F3SH-A complies with the following regulations and standards:
 - 1. EU Regulations
 - Machinery Directive: Directive 98/37/EC
 - EMC Directive: Directive 89/336/EEC
 - European standards: EN61496-1 (TYPE 4 ESPE), prEN61496-2 (TYPE 4 AOPD)
 - 3. International standards: IEC61496-1 (TYPE 4 ESPE), IEC61496-2 (TYPE 4 AOPD)
 - American standards: UL61496-1 (type 4 ESPE), UL61496-2 (type 4 AOPD), UL508, UL1998, CAN/CSA22.2 No. 14, CAN/CSA22.2 No. 0.8
 - JIS standards: JIS B9704-1 (type 4 ESPE), JIS B9704-2 (type 4 AOPD)
 - (3) The F3SN-A/F3SH-A received the following approvals from the EU accredited body DEMKO A/S:
 - EC Type-Examination in accordance with the EU Machinery Directive (TYPE 4 ESPE)
 - Certificate of a competent body for EMC
 - DEMKO Type Approval
 - Type 4 ESPE (EN61496-1)
 - Type 4 AOPD (prEN61496-2)
 - (4) The F3SN-A/F3SH-A received the following approvals from the Third Party Assessment Body UL:
 - Certificate of UL listing for US and Canadian safety standards Both of which are: TYPE 4 ESPE (UL61496-1), TYPE 4 AOPD (UL61496-2)

- (5) The F3SN-A/F3SH-A received the following approvals from BG-PRUFZERT of Germany:
 - BG test and approval mark
 - License
 - Type 4 ESPE (EN61496-1)
 - Type 4 AOPD (prEN61496-2)
- 3. The F3SN-A/F3SH-A is designed according to the following standards. To make sure that the F3SN-A/F3SH-A complies with the following standards and regulations, you are asked to design and use it as provided by any other related standards, laws, and regulations. (Underlined regulations are applicable to the F3SN-A only.) Consult UL or other standardization bodies if you have any questions.
 - EN415-4, prEN691, EN692, prEN693 (European standards)
 - OSHA 29 CFR 1910. 212 (US Industrial Safety and Health Regulation)
 - OSHA 29 CFR 1910. 217 (US Industrial Safety and Health Regulation)
 - ANSI B11. 1 B11. 19 (US standard)
 - ANSI/RIA 15. 06 (US standard)

Detection zone and intrusion path

F3SN-A Safety Light Curtain

Install protective structures around the machine so that you must pass through the detection zone of the F3SN-A to reach a hazardous part of the machine.

Install the F3SN-A so that some part of the operator's body remains in the detection zone at all times when the operator works in a hazardous area. Failure to do so may result in serious injury.

Correct Installation

A hazardous part of a machine can be reached only by passing through the sensor detection zone.

Some part of the operator's body remains in the detection zone while they are working.

Incorrect Installation

A hazardous part of a machine can be reached without passing through the sensor detection zone

A worker is between the sensor detection zone and a hazardous part of a machine.

F3SH-A Multi-beam Safety Sensor

Install protective structures around the machine so that you must pass through the detection zone of the F3SH-A to reach a hazardous part of the machine.

If it is possible for an operator to get between the sensor's detection zone and the hazardous part of the machine, design the system so that machinery cannot start up automatically. Make sure that machinery cannot restart while the operator is in the hazardous area. Position the switch for restarting machinery in a location from which the status of the hazardous area can be seen clearly. The switch position location must be a place where the switch cannot be operated from within the hazardous area.

Failure to do so may result in serious injury.

Use of the fixed blanking function

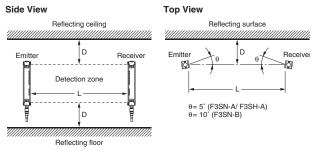

After setting the fixed blanking, check that the F3SN-A detects a test rod at any position in the detection zone through which a person can reach the hazardous part of the machine. If any positions are found by check above, install protective structures to prevent intrusion, which the F3SN-A can not detect.

Failure to do so may result in serious injury.

Distances from reflective surfaces

Be sure to install the F3SN-A/F3SH-A to minimize the effects of reflection from nearby surfaces.

Failure to do so may cause detection to fail and may result in serious injury.

Install the F3SN-A/F3SH-A with minimum Distance D shown above from reflective surfaces (highly reflective surfaces) such as metal walls, floors, ceilings, and work pieces.

| Distance between | Minimum installation distance D |
|--|--|
| emitter and receiver (Operating range L) | F3SN-A/ F3SH-A |
| 0. 2 to 3 m | 0.13 m |
| over 3 m | $L/2 \times \tan 2.5^{\circ} = L \times 0.044 \text{ (m)}$ |

Safety distance

Always maintain a safe distance (S) between the light curtain and a hazardous part of a machine.

Failure to do so causes the machine to fail to stop before an operator reaches the dangerous area and may result in serious injury.

Use of the floating blanking increases the size of the detection capability. To calculate a safety distance, be sure to use the increased size of the detection capability.

Failure to do so causes the machine to fail to stop before an operator reaches the dangerous area and may result in serious injury.

The "safety distance" is the minimum distance that must be maintained between the F3SN-A/F3SH-A and a hazardous part of a machine in order to stop the machine before someone or something reaches it. The safety distance is calculated based on the following equation when a person moves perpendicular to the detection zone of a light curtain.

Safety distance (S) = Intrusion speed into the detection zone (K)

- × Total response time for the machine and light curtain (T)
- + Additional distance calculated based on the detection capability of the light curtain (C)(1)

The safety distance varies with national standards and individual machine standards. The equation is also different if the direction of intrusion is not perpendicular to the detection zone of the light curtain. Be sure to refer to related standards.

F3SN-A Safety Light Curtain

Reference

Method for calculating safety distance as provided by European Norm EN999 (for intrusion perpendicular to the detection zone)

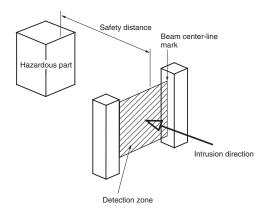

Detection capaibility: 40mm or less

Substitute K = 2000 mm/s and C = 8 (d - 14 mm) in equation (1) and calculate as shown below.

 $S = 2000 \text{ mm/s} \times (Tm + Ts) + 8 (d - 14 \text{ mm}) \dots (2)$ Where: S = Safety distance (mm)

Tm = Machine response time (s) (See note 1)
Ts = Light curtain response time (s) (See note 2)

d = Detection capability of the light curtain (mm)

e. g.:

Tm = 0.05 s, Ts = 0.01 s, d = 14 mm:

 $S = 2000 \text{ mm/s} \times (0.05 \text{ s} + 0.01 \text{ s}) + 8 (14 \text{ mm} - 14 \text{ mm}) = 120 \text{ mm}$

Use S=100 mm if the result of equation (2) is less than 100 mm. Recalculate using the following equation with K=1600 mm/s if the result is over 500 mm.

$$S = 1600 \text{ mm/s} \times (Tm + Ts) + 8 (d - 14 \text{ mm})....(3)$$

Use S = 500 mm if the result from equation (3) is less than 500 mm.

Detection capability: over 40mm

Substitute K = 1600 mm/s and C = 850 mm in equation (1) and calculate as shown below.

 $S = 1600 \text{ mm/s} \times (Tm + Ts) + 850$

Where: S = Safety distance (mm)

Tm = Machine response time (s) (See note 1)

Ts = Light curtain response time (s) (See note 2)

e. g.:

Tm = 0.05 s, Ts = 0.01 s:

 $S = 1600 \text{ mm/s} \times (0.05 \text{ s} + 0.01 \text{ s}) + 850 \text{ mm} = 946 \text{ mm}$

Note: 1 . The machine response time refers to the maximum time from the moment the machine receives a stop signal to the moment the hazardous part of the machine stops. The machine response time should be measured on actual machines. The machine response time should be measured and confirmed periodically.

Response Time Table

| | Protective height (mm) | Number | Response time | |
|-------------|------------------------------|------------|---------------|--------------|
| Model | | of beams | ON to OFF | OFF to ON |
| | 180 to 450 | 20 to 50 | 10.0 ms | 40 ms |
| F3SNA 🗆 🗆 🗆 | 459 to 765 | 51 to 85 | 12.5 ms | 50 ms |
| P14(-01) | 774 to 1080 | 86 to 120 | 15.0 ms | 60 ms |
| | 1089 to 1125 | 121 to 125 | 15.5 ms | 62 ms |

| | Protective Number | | Response time | |
|------------------------|-------------------|-----------|---------------|--------------|
| Model | height (mm) | of beams | ON to OFF | OFF to ON |
| F3SN-A□□□□ P25(-01) | 217 to 772 | 13 to 50 | 10.0 ms | 40 ms |
| | 787 to 1297 | 51 to 85 | 12.5 ms | 50 ms |
| | 1312 to 1822 | 86 to 120 | 15.0 ms | 60 ms |

| | Protective height (mm) Number of beams | Response time | | |
|------------------------|--|---------------|--------------|--------------|
| Model | | | ON to OFF | OFF to ON |
| F3SN-A□□□□ P40(-01) | 217 to 757 | 7 to 25 | 10.0 ms | 40 ms |
| | 787 to 1297 | 26 to 43 | 12.5 ms | 50 ms |
| | 1327 to 1807 | 44 to 60 | 15.0 ms | 60 ms |

| | Protective | Number | Response time | | |
|----------|----------------|----------|---------------|--------------|--|
| Model | height (mm) | of beams | ON to OFF | OFF to ON | |
| F3SN-A | 277 to 757 | 5 to 13 | 10.0 ms | 40 ms | |
| P70(-01) | 817 to 1297 | 14 to 22 | 12.5 ms | 50 ms | |
| | 1357 to 1777 | 23 to 30 | 15.0 ms | 60 ms | |

 Response time for series connected types is calculated as follows: (F3SN-A)

For 2 sets:

Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain 2 + 3 ms
Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain 2 + 12 ms
For 3 sets:

Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain 2 + Response time of Light curtain 3 + 4 ms

Response time (ON to OFF): Response time of Light curtain 1 + Response time of Light curtain 2 + Response time of Light curtain 3 + 16 ms

- Response time of F3SP-B1P is 10 ms, operation time is 100 ms.
- The light curtain response time refers to the time required for output to change from ON to OFF.
- 2. When using the F3SP-B1P, determine the safety distance by adding the response time of the F3SP-B1P to that of the F3SN given in the table above.

Reference

Method for calculating the safety distance as provided by ANSI B11. 19 (US)

Safety distance (S) = Intrusion speed into the detection zone (K)

Response time (Ts + Tc + Tr + Tbm) + Additional distance (Dpf)

Where:

 $\mathsf{K} = \mathsf{Intrusion}$ speed (Recommended value in OSHA standards

is 1600 mm/s)

ANSI B11. 19. does not define Intrusion speed (K). When determining K, consider possible factors including physical ability of operators.

Ts = Time required for machine to stop (s)

Tr = Light curtain response time (s) (See note)

Tc = Maximum response time required for machine control circuit to apply brake (s)

Tbm = Additional time (s)

If the machine is provided with a brake monitor, Tbm = brake monitor setting time – (Ts + Tc). If not provided with a brake monitor, it is recommended to determine a value more than 20% of (Ts + Tc) as the additional time.

Dpf = Additional distance.

Dpf is calculated as follows based on ANSI standards:

 $Dpf = 3.4 \times (d-7.0)$ where d is the detection capability of the light curtain (mm).

e. g.:

Assume that: K = 1600 mm/s, Ts + Tc = 0.06 s,

Brake monitor setting time = 0.1s, Tr = 0.01s, d = 14 mm.

Then:

Tbm = 0.1 - 0.06 = 0.04 s

Dpf = 3.4 - (14 - 7.0) = 23.8 mm

 $S = 1600 \times (0.06 + 0.01 - 0.04) + 23.8 = 199.8 \text{ mm}$

Note: The light curtain response time refers to the time required for output to change from ON to OFF.

Reference

Method for calculating the safety distance as provided by ANSI/RIA R15.06 (US) (for intrusion perpendicular to the detection zone) Safety distance (Ds) = $K \times (Ts + Tc + Tr) + Dpf$

Where:

K = Intrusion speed: 1600 mm/s min.

Ts = Maximum stop time of machine/equipment (s)

Tc = Maximum stop time of control system (s)

Tr = Light curtain response time (s)

Os = Diameter of the smallest detectable object (mm)

Dpf = Additional distance (mm)

Assume that the sensor is installed with the lowest beam height above the floor at 300 mm and the highest beam height above the floor at 1200 mm, with the diameter of the smallest detectable object being 64 mm or less. Then, Dpf is determined from:

$$Dpf = 3.4 \times (Os - 6.875 \text{ mm}).$$

If the diameter of the smallest detectable object is more than 64 mm, Dpf is calculated to be 900 mm.

e. g.:

• F3SN-A P40 Safety Light Curtain

Assume that K = 1600 mm/s, Ts + Tc = 0.06 s, Tr = 0.01 s, and Os = 40 mm.

Then:

 $S = 1600 \times (0.06 + 0.01) + Dpf$

 $= 1600 \times (0.06 + 0.01) + 3.4 (40 - 6.875)$

= 225 mm

• F3SN-A P70 Safety Light Curtain

Assume that K = 1600 mm/s, Ts + Tc = 0.06 s, Tr = 0.01 s, and Dpf = 900 mm.

Then:

 $S = 1600 \times (0.06 + 0.01) + 900$

= 1012 mm

Note: The light curtain response time refers to the time required for output to change from ON to OFF.

F3SH-A Multi-beam Safety Sensor

Reference

Method for calculating safety distance as provided by European Norm EN999 (for intrusion perpendicular to the detection zone)

Substitute K = 1600 mm/s and C = 850 mm in equation (1) and calculate as shown below.

 $S = 1600 \text{ mm/s} \times (Tm + Ts) + 850$

Where:

S = Safety distance (mm)

Tm = Machine response time (s) (See note 1)

Ts = Sensor response time (s) (See note 2)

e. g.:

Tm = 0.05 s, Ts = 0.01 s:

 $S = 1600 \text{ mm/s} \times (0.05 \text{ s} + 0.01 \text{ s}) + 850 \text{ mm} = 946 \text{ mm}$

Note: 1 . The machine response time refers to the maximum time from the moment the machine receives a stop signal to the moment the hazardous part of the machine stops. The machine response time should be measured on actual machines. The machine response time should be measured and confirmed periodically.

The sensor response time refers to the time required for output to change from ON to OFF.

Installation

How to prevent mutual interference

The emitter and the receiver to be set facing each other should be a pair of the same set. Erroneous combination may create a zone where objects cannot be detected.

Do not use the sensors for a system where the beam is reflected, or object detection may be disabled. In such an application, use a beam path diversion mirror to prevent the beam reflected from an object from entering the receiver.

When installing two or more pairs of the F3SN-A/F3SN-B/F3SH-A, take necessary measures to prevent mutual interference. Examples of such measures include electrical interconnection and the use of baffle plates.

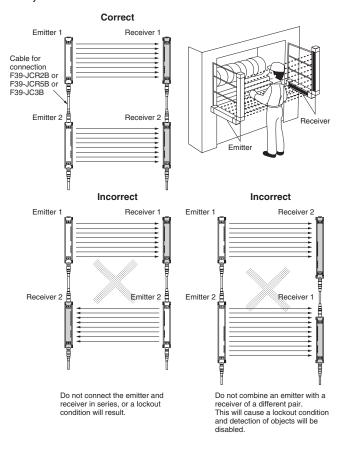

Correct Use

Installation

How to prevent mutual interference

Series connection (Up to 3 sets, 240 beams, sensor models ending in -01, -03, -04, and -05 are required for series connection)

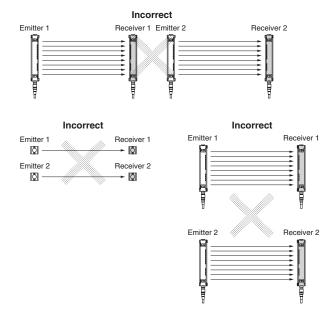

Two or more pairs of the F3SN-A can be connected in series. When connected in series, the F3SN-A sensors generate beams in a time-sharing manner. Thus, they prevent mutual interference and ensure safety.

When not connected

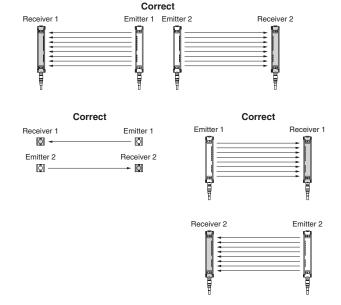

When installing two or more pairs of light curtains independently from each other due to inconvenience of wiring or other reason, take proper measures to prevent mutual interference. If mutual interference occurs, a lockout condition will result for the F3SN-A/F3SH-A.

· Installation which may cause mutual interference

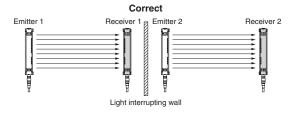

• Installation to prevent mutual interference

 Install so that the two light curtains emit in the opposite directions (staggered).

(2) Install a light interrupting wall in between sensors.

(3) Install the light curtains facing away from the one another to eliminate mutual interference.

| Distance between | Minimum installation distance D | | |
|--|--|--|--|
| emitter and receiver (Operating range L) | F3SN-A/ F3SH-A | | |
| 0. 2 to 3 m | 0.26 m | | |
| over 3 m | $L \times \tan 5^{\circ} = L \times 0.088 \text{ (m)}$ | | |

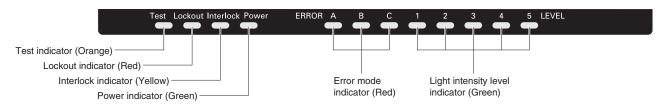

(4) Use a F39-HS spatter protection slit cover.

Operating range

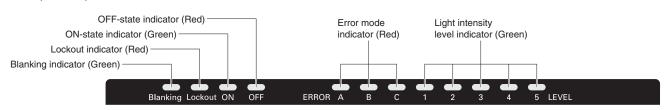

If the distance between the emitter and the receiver is less than 0.2 m, there is a possibility of chattering. Be sure to use the sensors within the rated operating range.

Names and Functions of Parts

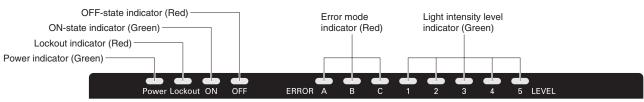

Emitter (F3SN-A/F3SH-A)

Installation

How to attach mounting bracket (F39-L19/L20)

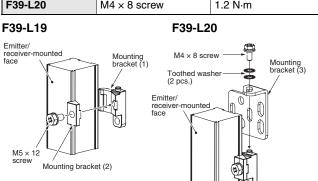

To fully utilize the performance of sensors, locate the F39-L19/L20 mounting brackets in the number satisfying the dimensions "A" and "B" in the sensor longitudinal direction.

- For the F39-L19 Spacing "A": 670 mm max.
- For the F39-L20 Spacing "B": 400 mm max.

Note: When installing sensors at locations susceptible to vibration and shock, increase the number of mounting brackets.

| Mounting bracket | Screw × length (mm) | Tightening torque | |
|------------------|---------------------|-------------------|--|
| F39-L19 | M5 × 12 screw | 2.0 N·m | |
| F39-L20 | M4 × 8 screw | 1.2 N·m | |

Brackets and screws included in one set

Dimensions (Unit: mm)

Main unit

Dimensions according to the model can be calculated by using the following equations.

• F3SN-A P14(-01)

Dimension C2 (protective height): 4 digits in the model name Dimension A = C2 + 86 Dimension B = C2 + 54

Dimension D = 15.5 Dimension E = C2 - 9

Dimension F: See the table below.

Dimension P = 9

| C2 (protective height) | Number of intermediate mounting bracket | Dimension F (see note) |
|------------------------|---|---------------------------|
| to 0620 | 0 | |
| 0621 to 1125 | 1 | F = B/2 |

Note: If value F obtained from the above equation is not used, set F to 670 mm or less.

• F3SN-A P25(-01)/P40(-01)/P70(-01), F3SN-B P25/P40/P70

Dimension C1 (protective height): 4 digits in the model name

Dimension A = C1 + 64 Dimension B = C1 + 32

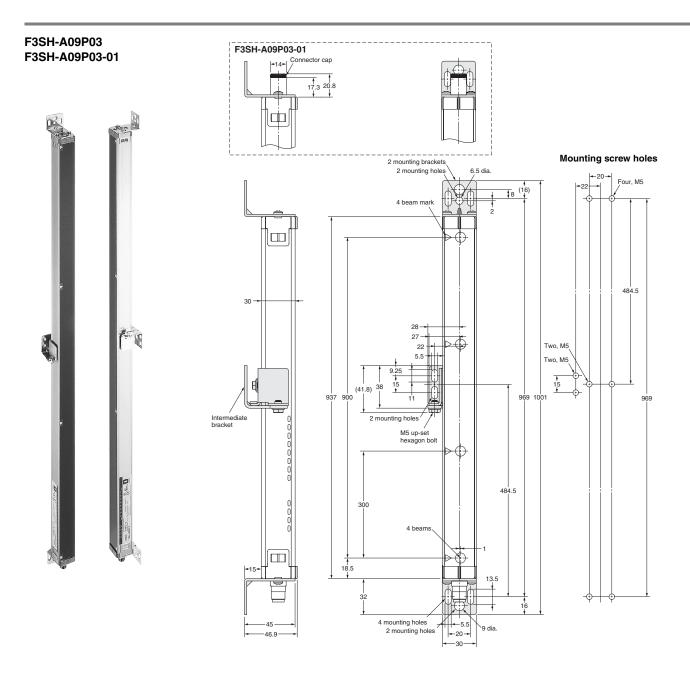

Dimension D = 18.5

Dimension E = C1 – 37
Dimension F: See the table below.

| C1 (protective height) | Number of intermediate mounting bracket | Dimension F (see note) |
|------------------------|---|---------------------------|
| to 0640 | 0 | |
| 0641 to 1280 | 1 | F = B/2 |
| 1281 to 1822 | 2 | F = B/3 |

Dimension P: See the table below

| Detection capability | Dimension P |
|----------------------|-------------|
| 25 | 15 |
| 40 | 30 |
| 70 | 60 |

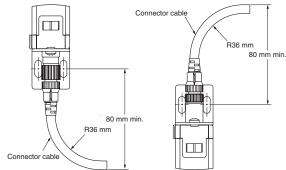

Mounting Precautions

- Note: 1. The mounting bracket (3) (see Mounting brackets (intermediate)) is shown on the left-hand side of the sensor as an example. If the mounting bracket (3) is on the right-hand side of the sensor then the mounting bracket (3) is on the right-hand side of the sensor then the mounting holes must also be on the right-hand side.

 2. When using with the cable bent, allow at least the dimensions shown on the right.

 (Missing boarding realize of a the DOC.

(Minimum bending radius of cable: R36 mm.)
